

Case Study

International Packaging Manufacturer deals exclusively with Michigan Specialty Coatings

An international packaging manufacturer relies on Michigan Specialty Coatings for its local facilities. Michigan Specialty Coatings performed structural repairs and applied fast-cure flooring which allowed the customer to quickly return to service.

Successful projects included eliminating safety hazards and complete building restoration. A strong relationship allows the client to deal solely with one contractor for all their concrete and flooring needs.

Project Brief

- Complete building restoration
- Severely damaged stairs and hallways repaired with non-skid bridge construction mortar
- Warehouse joints rebuilt with **fast-cure MMA** and treated with semi-rigid joint filler
- **2,800 square feet** in main production line received 1/4" Epoxy mortar with High-Traffic system topcoat
- High-performing industrial, machine & equipment coating

Project Services & Systems

Tank & Containment Coating Systems

Corrosion resistant coatings protect industrial concrete containments, storage tanks, factory machines, and any other steel surfaces. Long service life and solvent resistance are key benefits of vinyl ester, epoxy reinforced and containment systems. Lining systems protect critical assets by with superior chemical resistance for environments with heavy chemical exposure.

Performance - superior chemical resistance, corrosion resistant, solvent resistant, heavy duty, high performing, long service life

Applications - containment and storage tanks, paper and pulp, chemical tanks and secondary containment

Epoxy & Urethane Coating Systems

Manufacturing and industrial facilities require floors able to withstand extreme environments. Chemical exposure and heavy loads quickly damage the wrong floor system. Expert knowledge of industrial environments and flooring conditions is key to a successful floor project. Michigan Specialty coating engineers custom solutions to deliver the right systems that provide a long service life and return on investment.

Performance - chemical resistance, impact resistance, abrasion resistant, slip and fall prevention, seamless, easy to maintain, heavy load capacity

Applications - industrial, manufacturing, production lines, assembly lines, vehicle traffic

Urethane Concrete Mortar

Designed for the food and beverage industry, this systems provides premium protection in wet environments. Urethane concrete mortars have superior resistance to staining from exposure to organic acids, solvents, and chemicals. With thermal shock protection up to 220F, these systems are perfect in areas experiecing frequent hot water wash downs and thermal cycling.

Performance - quick-cures in hours, NOT days; chemical, acids, & solvent resistance; designed for wet environments; stain, impact, and abrasion resistance.

Applications - food and beverage, meat processing, breweries and wineries, bottling & packaging facilities

Quick-cure MMA Coatings

When production & high-traffic areas are shutdown due to concrete and coating failures, a fast-curing solution will save time and money. Quick-curing epoxies, urethanes, and MMA floor systems provide durable and resistant solutions that allow for immediate return to service. These systems adhere to existing coatings, bare concrete, or steel substrates and are a perfect option for high-profile, image sensitive areas.

Performance - immediate return to service, chemical resistance, color matching available, seamless, easy to maintain

Applications - production areas, traffic aisles, warehouses, distribution, commercial, service areas, high-traffic areas, institutional

Michigan Specialty Coatings is the preferred coatings provider to the industry's leading product manufacturers

Our close relationships with the product manufacturers provide us access to the best quality coatings available.

Whatever the operation, Michigan Specialty Coatings can offer a customized flooring solution that meet the unique needs of your facility.
